BRAND NAME JUSTIFICATION
FOR AN ACTION NOT EXCEEDING THE SIMPLIFIED ACQUISITION THRESHOLD
AUTHORITY: RFO 12.102(a)
REQUIREMENTS-26-4251

1. **Agency and contracting activity.** Department of Commerce (DOC), NOAA Acquisition and Grants Office (AGO), Western Acquisition Division **(**WAD), and Atlantic Meteorological and Oceanographic Laboratory (AOML).

2. **Description of supplies or services required to meet agency needs (including the estimated value).**

   This is a brand name justification to provide AOML with Johnson Controls International (JCI) Building Automation System (BAS) Heating, Ventilation and Air Conditioning (HVAC) system as part of the HVAC upgrade project at AOML.

   AOML requires upgrades to its existing HVAC systems, including upgrading the Metasys Building Management System. The upgrades to the HVAC system must utilize JCI BAS system and system components to successfully and seamlessly integrate into AOML's existing building automation system. The required upgrades and replacements include JCI components such as switches, relays, sensors, temperature elements and ball valves which are all required to communicate with the Variable Air Volume Modular Assembly (VMA) and Network Automation Engine (NAE) controller

   A firm-fixed-price (FFP) contract is contemplated for the entirety of the HVAC upgrade project. The total estimated value for the brand-name requirement of this project is [redacted]

3. **Identification of the brand name to be solicited.**

   Johnson Controls International

4. **Authority and supporting rationale.**

   Items peculiar to one manufacturer, brand name - RFO 12.102(a)

   JCI is the only brand name that can meet the Government's requirement for BAS HVAC system and system components made by JCI. The JCI BAS HVAC system currently serves as the system backbone for AOML's HVAC system. Currently, AOML's HVAC system and system components only utilize JCI components to ensure seamless connectivity and BAS network integration throughout the facility. The existing JCI BAS within the AOML facility also controls other key facility systems such as the building's fire suppression system, datacenter and others. Based on market research, similar systems cannot meet or be modified to meet the Government's needs and potentially introduce an unacceptable level of technical risk for a fully integrated BAS system. Introducing a different BAS system and system components would require a complete overhaul and replacement of AOML's building maintenance system which requires a significant amount of time and funding from the Government. Procuring this brand-name requirement avoids unacceptable delays and significant resource costs in providing AOML with a fully integrated BAS system.

5. **Market Research.**
   Market research was conducted based on a survey of commercially available BAS systems and contacting knowledgeable individuals within the Government. Based on market research results, only the JCI BAS system and system components are capable of satisfying the Government's minimum requirements.

6. Technical/Requirements Representative Certification

I certify that this requirement constitutes the Government's minimum needs and the supporting data provided herein is accurate and complete to the best of my knowledge and belief.

[redacted]

7. Determination

I hereby determine that the circumstances of this action deem only one source is reasonably available. This determination is accurate and complete to the best of my knowledge and belief.
